

REGENERATIVE THERMAL OXIDIZERS RTO

Highest efficiency for removal of Volatile Organic Compounds VOCs

REGENERATIVE THERMAL OXIDIZERS RTO are specifically designed to **destroy the Volatile Organic Compounds VOCs from the process gas through thermal oxidation at high temperature**, the chemical energy contained in the pollutants is transformed in thermic energy to sustain the combustion itself.

The mass of inert material accumulate cyclically and give back the heat generated by the combustion process.

Efficiency of thermal recovery up to 96% drastically reducing the consumption of the support fuel and the plant operating costs.
